

Redefining Waste

Leading advisory support for
construction, demolition
and excavation waste producers
and end-users

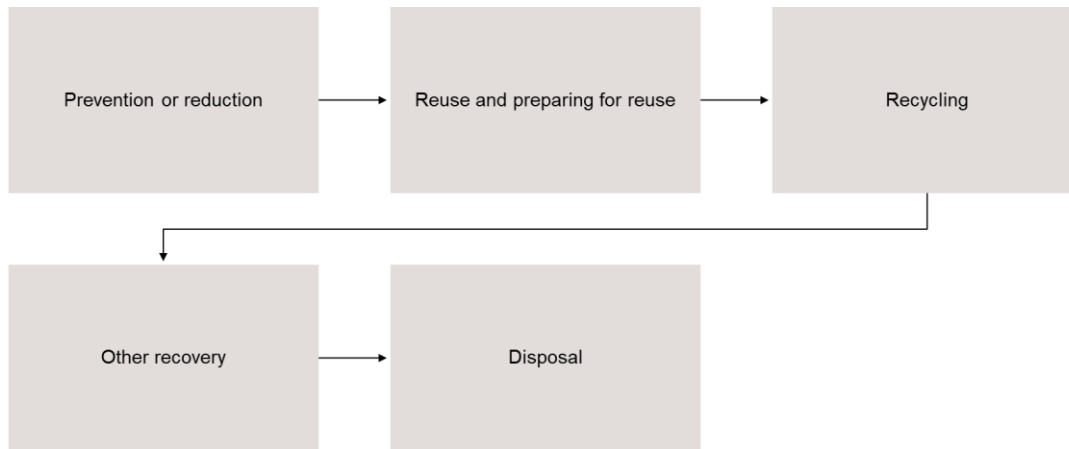

What we do

Our leading technical waste advisory experience and regulatory understanding, combined with multidisciplinary capability, ensure technically sound and commercially focused solutions for producers and users of Construction, Demolition and Excavation (CDE) wastes.

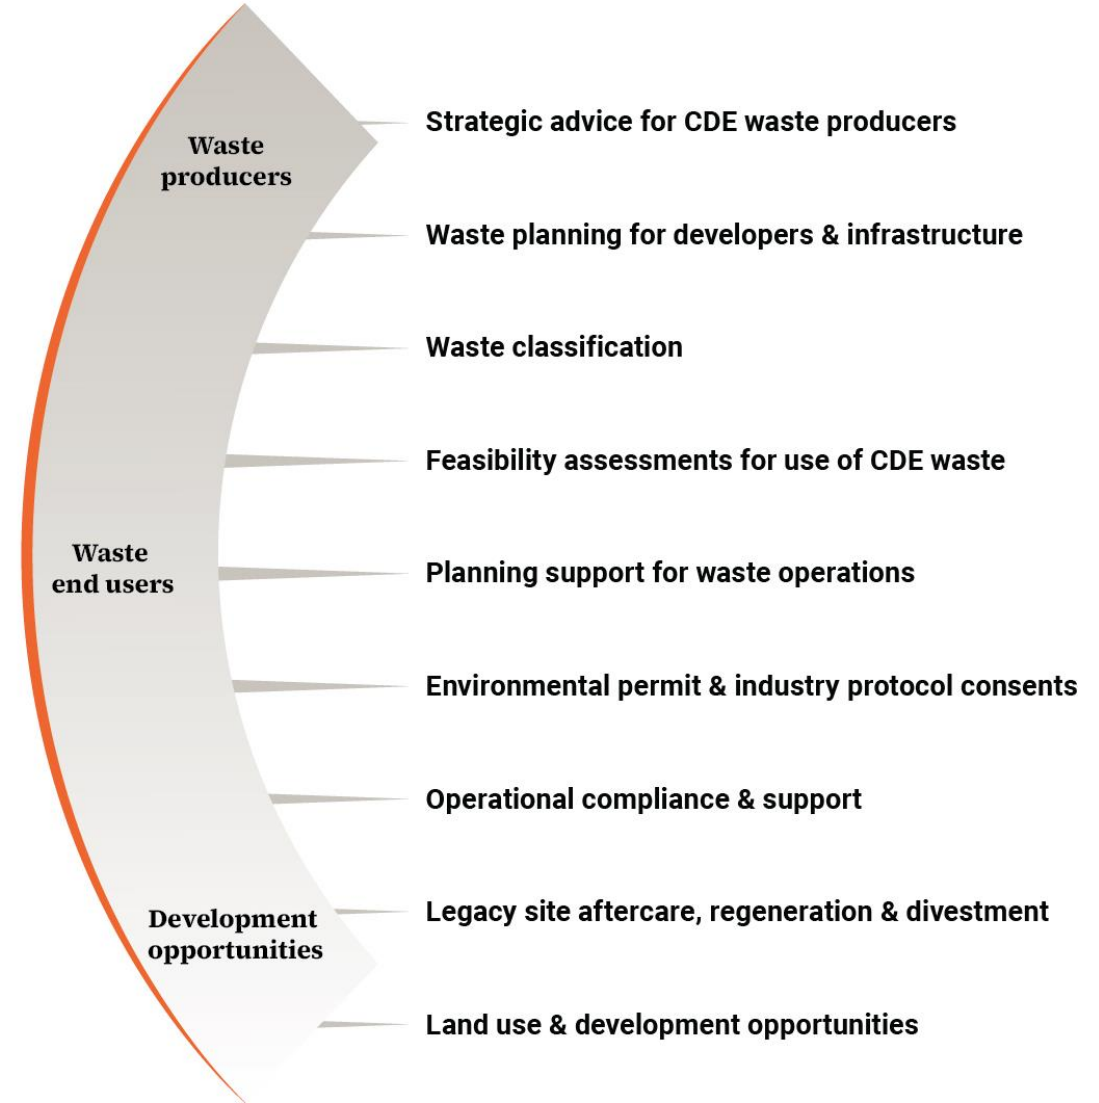

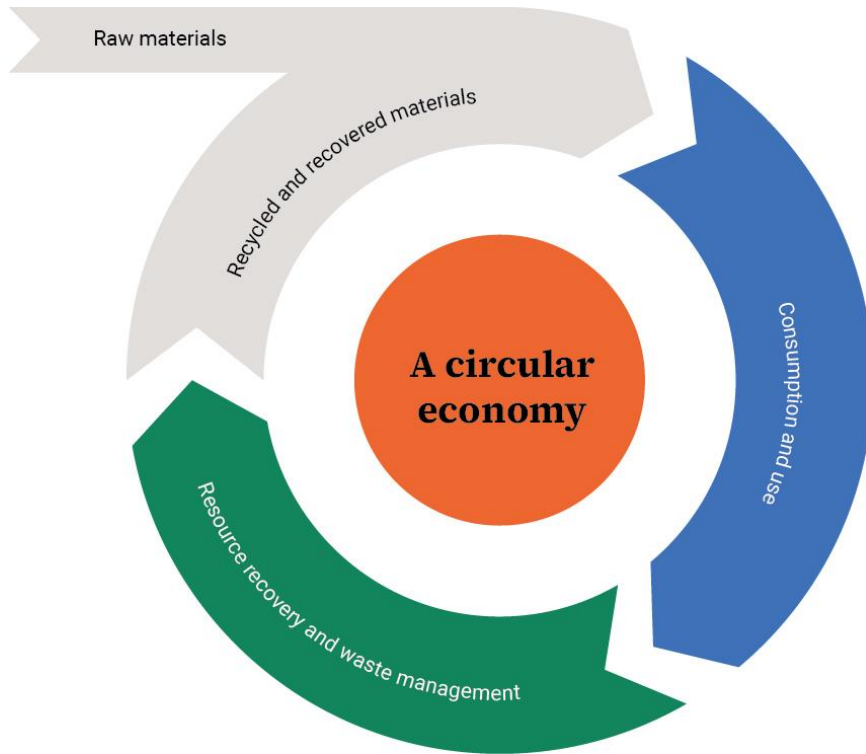

Our CDE waste management advice uses the guiding principles of the circular economy, sustainability, commercial best practice and economically viable solutions.

Services at every stage

Whether you need one service or many, we will collaborate and support your team to optimise the use of materials at every stage of the project.

What we cover

Designing out waste	Environmental permitting	Geo-technical services	Waste classification	End of waste
From initial feasibility to full project strategic advice, for developers and infrastructure	Exemptions; Treatment; Recovery; and Disposal permit applications	Engineering design, Material specification, stability etc.	Duty of Care compliance, identification of appropriate end-use options	Quality protocols including CL:AIRE Code of Practice and WRAP protocols.
